

# Course Schedule

**STAT 251 – Fall 2026.** Classes begin Monday, August 24 and end Friday, December 11. Labor Day (September 7) and Fall Recess (November 23–27) are university holidays. Final examinations run December 14–18; the STAT 251 final is Monday, December 14, 12:45PM–2:45PM in TLC 040.

## Registration and withdrawal deadlines (Fall 2026)

These are the University of Idaho Registrar’s official Fall 2026 deadlines. STAT 251 is a **full-term** course, so the *Full term* column is the one that applies to this class; the eight-week columns are included for reference. These deadlines are set by the Registrar, not by the instructor.

University of Idaho Registrar deadlines for Fall 2026, by course length. STAT 251 is a full-term course.

| Action                                                       | Full term:<br>Aug. 25 –<br>Dec. 19 | Early eight-week:<br>Aug. 24 –<br>Oct. 17 | Late eight-week:<br>Oct. 20 –<br>Dec. 19 |
|--------------------------------------------------------------|------------------------------------|-------------------------------------------|------------------------------------------|
| Register, add or wait list <i>without permission</i>         | September 2, 2026                  | September 2, 2026                         | October 24, 2026                         |
| Drop (no W)                                                  | September 8, 2026                  | September 2, 2026                         | October 24, 2026                         |
| Change variable credit                                       | September 8, 2026                  | September 2, 2026                         | October 24, 2026                         |
| Change to pass/fail grading ( <i>submit</i> )                | September 8, 2026                  | September 2, 2026                         | October 24, 2026                         |
| Audit (AD grade) ( <i>submit</i> )                           | September 8, 2026                  | September 2, 2026                         | October 24, 2026                         |
| Register/add late <i>with instructor permission override</i> | September 8, 2026                  | N/A                                       | N/A                                      |
| Withdraw to audit (WA grade) ( <i>submit</i> )               | October 31, 2026                   | September 26, 2026                        | November 21, 2026                        |

| Action                                | Full term:<br>Aug. 25 –<br>Dec. 19 | Early eight-week:<br>Aug. 24 –<br>Oct. 17 | Late eight-week:<br>Oct. 20 –<br>Dec. 19 |
|---------------------------------------|------------------------------------|-------------------------------------------|------------------------------------------|
| Withdraw (\$5 fee charged to account) | October 31, 2026                   | September 26, 2026                        | November 21, 2026                        |

If you need an instructor permission override to add the course late, contact me **before** the September 8 deadline – overrides cannot be issued after that date.

For the authoritative and most current list of deadlines, holidays and the official academic calendar, see the University of Idaho [Dates and Deadlines](https://www.uidaho.edu/registrar/dates-deadlines) (<https://www.uidaho.edu/registrar/dates-deadlines>) page and the [Academic Calendar](https://catalog.uidaho.edu/calendar/) (<https://catalog.uidaho.edu/calendar/>).

## Weekly schedule

**Please note: this schedule is meant to provide an outline of the semester and is tentative. The pace of the course may deviate from the exact schedule outlined below. Any changes will be announced in class and posted here.**

Week-by-week topic schedule for Fall 2026. Tentative; changes are announced in class and posted here.

| Day           | Date            | Topic                                     |
|---------------|-----------------|-------------------------------------------|
| <b>WEEK 1</b> |                 |                                           |
| Monday        | August 24, 2026 | Syllabus day: policies, website tour, Q&A |
| Wednesday     | August 26, 2026 | Introduction: The big picture             |
| Friday        | August 28, 2026 | Describing and visualizing distributions  |
| <b>WEEK 2</b> |                 |                                           |

| Day           | Date               | Topic                                                                                                                                                                         |
|---------------|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Monday        | August 31, 2026    | Distributions and frequency tables                                                                                                                                            |
| Wednesday     | September 2, 2026  | Shape of a distribution; dot plots, stem-and-leaf plots, histograms – <b>Last day to register, add or wait list without permission</b>                                        |
| Friday        | September 4, 2026  | Measures of location and position                                                                                                                                             |
| <b>WEEK 3</b> |                    |                                                                                                                                                                               |
| Monday        | September 7, 2026  | Labor Day - NO CLASS                                                                                                                                                          |
| Wednesday     | September 9, 2026  | Measures of spread, boxplot – <b>September 8 was the last day to drop without a W, change variable credit or grading basis, or add with an instructor permission override</b> |
| Friday        | September 11, 2026 | Cumulative distributions; last day of material for Exam 1 – <b>Homework 1 due Sunday at 11:59PM</b>                                                                           |
| <b>WEEK 4</b> |                    |                                                                                                                                                                               |
| Monday        | September 14, 2026 | Sampling designs: simple random, stratified, and cluster sampling                                                                                                             |
| Wednesday     | September 16, 2026 | Exam 1 Review                                                                                                                                                                 |
| Friday        | September 18, 2026 | Exam 1                                                                                                                                                                        |
| <b>WEEK 5</b> |                    |                                                                                                                                                                               |
| Monday        | September 21, 2026 | Sampling designs continued: systematic, stratified, and cluster sampling; sampling and nonsampling error                                                                      |

| Day           | Date               | Topic                                                                                                                                |
|---------------|--------------------|--------------------------------------------------------------------------------------------------------------------------------------|
| Wednesday     | September 23, 2026 | Course project discussion; basics of experimental design, association vs. causation – <b>Course project Steps 1–4 can be started</b> |
| Friday        | September 25, 2026 | Experimental design concluded: the three designs, randomization and research ethics; introduction to the normal distribution         |
| <b>WEEK 6</b> |                    |                                                                                                                                      |
| Monday        | September 28, 2026 | The normal distribution, z-scores, transformations                                                                                   |
| Wednesday     | September 30, 2026 | Identifying outliers, margin of error, statistical significance                                                                      |
| Friday        | October 2, 2026    | Introduction to probability, random variables, discrete probability distributions                                                    |
| <b>WEEK 7</b> |                    |                                                                                                                                      |
| Monday        | October 5, 2026    | Discrete probability distributions                                                                                                   |
| Wednesday     | October 7, 2026    | Continuous probability distributions                                                                                                 |
| Friday        | October 9, 2026    | Sampling distributions and the central limit theorem – <b>Homework 2 due Sunday at 11:59PM</b>                                       |
| <b>WEEK 8</b> |                    |                                                                                                                                      |
| Monday        | October 12, 2026   | More on sampling distributions, Introduction to confidence intervals                                                                 |
| Wednesday     | October 14, 2026   | Exam 2 Review                                                                                                                        |

| Day            | Date             | Topic                                                                                                                                       |
|----------------|------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| Friday         | October 16, 2026 | Exam 2                                                                                                                                      |
| <b>WEEK 9</b>  |                  |                                                                                                                                             |
| Monday         | October 19, 2026 | Confidence Intervals for a population proportion                                                                                            |
| Wednesday      | October 21, 2026 | Confidence Intervals for a population mean                                                                                                  |
| Friday         | October 23, 2026 | Choosing a minimum sample size, assumptions of estimators                                                                                   |
| <b>WEEK 10</b> |                  |                                                                                                                                             |
| Monday         | October 26, 2026 | Introduction to significance tests, P-values                                                                                                |
| Wednesday      | October 28, 2026 | Tests for a population proportion                                                                                                           |
| Friday         | October 30, 2026 | Tests for a population mean – <b>Homework 3 due Sunday at 11:59PM; October 31 is the last day to withdraw (W) or withdraw to audit (WA)</b> |
| <b>WEEK 11</b> |                  |                                                                                                                                             |
| Monday         | November 2, 2026 | Composite hypotheses, relationship between confidence intervals and hypothesis tests, the sign test                                         |
| Wednesday      | November 4, 2026 | Making decisions, types of errors in hypothesis tests, statistical power                                                                    |
| Friday         | November 6, 2026 | Introduction to two-sample tests, independent vs dependent samples                                                                          |
| <b>WEEK 12</b> |                  |                                                                                                                                             |

| Day                          | Date              | Topic                                                                                     |
|------------------------------|-------------------|-------------------------------------------------------------------------------------------|
| Monday                       | November 9, 2026  | Tests for comparing two independent proportions or two independent means                  |
| Wednesday                    | November 11, 2026 | Tests for dependent samples, causal inference                                             |
| Friday                       | November 13, 2026 | Introduction to analyzing categorical variables – <b>Homework 4 due Sunday at 11:59PM</b> |
| <b>WEEK 13</b>               |                   |                                                                                           |
| Monday                       | November 16, 2026 | Goodness-of-fit tests and tests of independence                                           |
| Wednesday                    | November 18, 2026 | Exam 3 Review                                                                             |
| Friday                       | November 20, 2026 | Exam 3                                                                                    |
| <b>WEEK 14 – FALL RECESS</b> |                   |                                                                                           |
| Monday                       | November 23, 2026 | FALL RECESS - No Class                                                                    |
| Wednesday                    | November 25, 2026 | FALL RECESS - No Class                                                                    |
| Friday                       | November 27, 2026 | FALL RECESS - No Class                                                                    |
| <b>WEEK 15</b>               |                   |                                                                                           |
| Monday                       | November 30, 2026 | Cramer's V, McNemar's Test, Fisher's exact test                                           |
| Wednesday                    | December 2, 2026  | Measures of association                                                                   |

| Day                | Date              | Topic                                                                              |
|--------------------|-------------------|------------------------------------------------------------------------------------|
| Friday             | December 4, 2026  | Correlation and simple linear regression – <b>Homework 5 due Sunday at 11:59PM</b> |
| <b>WEEK 16</b>     |                   |                                                                                    |
| Monday             | December 7, 2026  | Coefficient of determination, tests for slope coefficients                         |
| Wednesday          | December 9, 2026  | Simple linear regression continued: omnibus F-test, checking assumptions           |
| Friday             | December 11, 2026 | Final exam Jeopardy review                                                         |
| <b>FINALS WEEK</b> |                   |                                                                                    |
| Monday             | December 14, 2026 | Final Exam, 12:45PM–2:45PM, TLC 040                                                |
| Saturday           | December 19, 2026 | Course project due at 11:59PM                                                      |
